Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Michell (U. S. Patent No. 5,673,985). Mitchell discloses a frame structure comprising:

four support corner posts (38) defining a front side, a rear side, and two opposite first and second sides, see Figure 4;

a first side wall (34) disposed on the first side of the frame structure and a second side wall (34) disposed on the second side of the frame structure; each side wall includes a top, a middle, and bottom angled rails, the rails are extended between corresponding pair of support posts, the top and bottom rails, each having an angle face (36) with exterior edges, interior edges and two end edges that are vertically parallel to the support posts, the two end edges are disposed between the angle face and the interior edges are sloping toward the two end edges and toward corner posts so that the end edges is at an angle less than 90 degrees relative to the exterior edges of the side wall; and

a support cross bar disposed between the support corner posts (38).

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. A. H. Levene et al., Benner, French, L. S. Taylor, List, McIlwraith, Benner et al. ('946) and ('255), Singer, Anderson et al., DeBortoli, and Berkun, are cited to show a rack system that has similar configurations of design to applicant's invention.
